EXPERIENCE

UX Designer · REIMAGINE Center Design-A-Thon, UCSD

Spring 2026

- Co-designed **Tether**, a MyChart extension addressing the living kidney donation crisis: 17 people die daily awaiting transplants, yet most patients lack awareness of or a trusted platform to connect.
- Conducted user research, including surveys and an interview with a living-donation advocate; synthesized findings into personas, journey maps, and a defined problem statement around emotional and logistical barriers for both recipients and donors.
- Prototyped a dual-sided platform designed for integration within MyChart, a platform serving 185M+ patients, featuring story-sharing for recipients, anonymized donor matching, and consolidated educational resources.
- Presented the full design pitch to judges at UCSD's Design and Innovation Building; awarded 2nd place.

UX Designer · Design Frontiers Design-A-Thon, UCSD

Spring 2026

- Co-designed **Tr-eye-ton**, a WebReg-integrated campus navigation platform addressing UCSD's broken built-in map, which lacks real-time GPS, indoor wayfinding, and live construction alerts.
- Led user research through freshman interviews, identifying 5+ critical gaps in the current navigation experience; translated findings into a room-level navigation system with schedule-synced routing and 2D/3D campus visualization.
- Designed the core feature set in Figma: smart home search with room-level precision, a daily schedule timeline with one-tap navigation launch, indoor floor-plan integration, and a real-time campus alert system with automatic rerouting.

PROJECTS

PlotWeaver — Roguelike Card Game | UCSD Video Game Development Club | valius95.itch.io/plotweaver

- Designed and built a published roguelike card game as lead designer and programmer, shipped on itch.io.
- Architected a five-card-type system (Protagonist/Ally, Performance, Plot, Conflict, Resolution) with a bond-and-synergy mechanic that shapes the core decision space for players.
- Collaborated within UCSD's VGDC, coordinating design iteration between art and programming.

EDUCATION

University of California, San Diego

Expected June 2028

B.S. Mathematics-Computer Science (Warren College) | Minor: Interdisciplinary Computing and the Arts (ICAM)

GPA: 3.78

Publication: "Research on the Influencing Factors of Heart Failure" — International Conference on Medical Imaging, Sanitation, and Biological Pharmacy; indexed on **Web of Science**.

SKILLS

Design & Prototyping: Figma (UX/UI prototyping, wireframing), user research & synthesis, 3D printing, laser cutting, rapid prototyping

Programming: Python, Java, JavaScript, C, C++

Data & Analysis: XGBoost, statistical modeling, multivariate analysis

ADDITIONAL EXPERIENCE

Data Science Intern, Bethune Hospital of China (Jun 2023–Jun 2024) — statistical analysis on medical research datasets ·

Hackathon Competitor, SDxUCSD — 2nd Place (2025) — built ARGUS, a multi-agent AI competitive-intelligence platform ·

Research Intern, iHub Program / UCL (Jan 2021–May 2022) — XGBoost modeling for heart-failure research
